CORE TECHNOLOGIES

- React / Next.js
- TypeScript
- Node.js
- Python (Django)
- Plotly & Recharts
- WebSockets / Socket.io
- Docker & CI/CD
- Nightwatch.js (E2E)
- Storybook
- PostgreSQL / MongoDB / Arango DB
- Three.js / React-three-fiber

CURRENTLY LEARNING

- Kubernetes & advanced Docker orchestration
- Cybersecurity
- AI - Computer Vision
- Web 3

ANDREAS LASKARIS

Full-Stack Engineer at Siemens DI (ex-Altair)

• React • TypeScript • Python • Node

PROFESSIONAL EXPERIENCE

Full-Stack Engineer

Siemens Digital Industries Software (Altair Engineering) – Dec 2022 – Present

- Designed and shipped a dynamic drag-and-drop dashboard framework supporting arbitrary widgets (charts, tables, 3rd-party WebGL viewers) via JSON configuration
- Built Jira-like project management UI with tasks, phases, milestones, real-time Gantt charts and Kanban boards (React + TypeScript + WebSockets)
- Developed reusable component library in Storybook for consistent UI across multiple internal engineering tools
- Implemented end-to-end testing suite with Nightwatch.js, achieving 90%+ automated coverage of critical user flows
- Created meta-UI system that auto-generates dashboards from JSON schemas – cut new tool delivery time by 60–70%
- Built backend APIs and real-time services using Python (Flask alternative) and Node.js (REST + WebSocket events)

Full-Stack Research Assistant

CERTH / ITI – Jan 2022 – Dec 2022

- Developed full-stack marketplace for EU SHOW project (React + Django) with PayPal & bank SDK integrations
- Deployed production system serving 2,000+ users across Europe

EDUCATION

Integrated Master's in Electrical & Computer Engineering

Technical University of Crete – 2014–2021

Thesis: Transient stability analysis of power systems with high wind penetration

MBA Candidate (part-time) – Expected 2026

FEATURED PROJECTS (INTERACTIVE PORTFOLIO)

Visit my [online portfolio](#)

- **E-commerce Platform:** Next.js 14 + TypeScript + Stripe + Tailwind. Features full checkout flow and product management.
- **AI Fruit Sorter:** Real-time computer-vision system using OpenCV: detects size, color, defects and sorts fruit on conveyor belt.
- **Anti-Drone Prototype:** Command-center dashboard concept for drone detection and mitigation (developed at CERTH).
